

Create Notebooks

Hands-on exercise

Create a new notebook

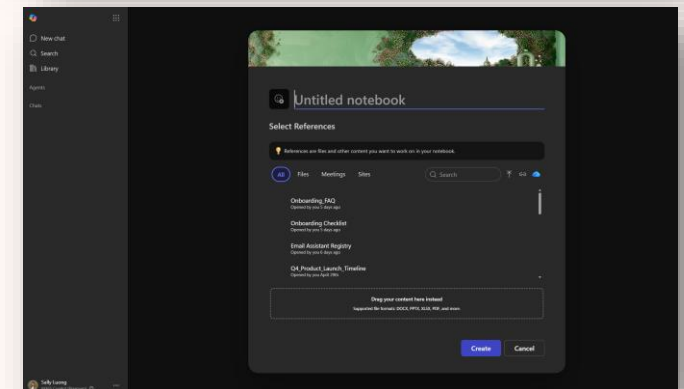

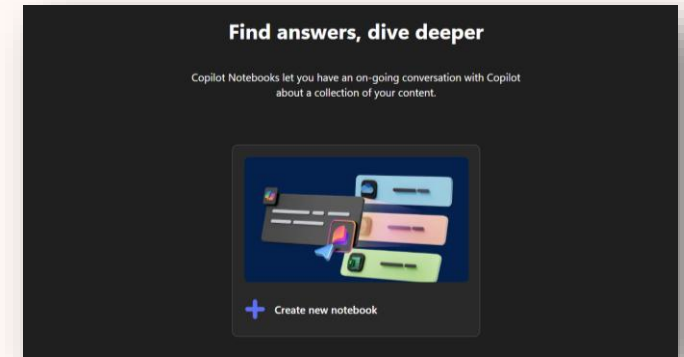

1. Open Copilot
2. Click the **app launcher** (top area)
3. Select "**Notebooks**" next to "Create"

4. Select "**Create new notebook**"
5. Enter a new name for your notebook
6. Select references (content) to add to your notebook.

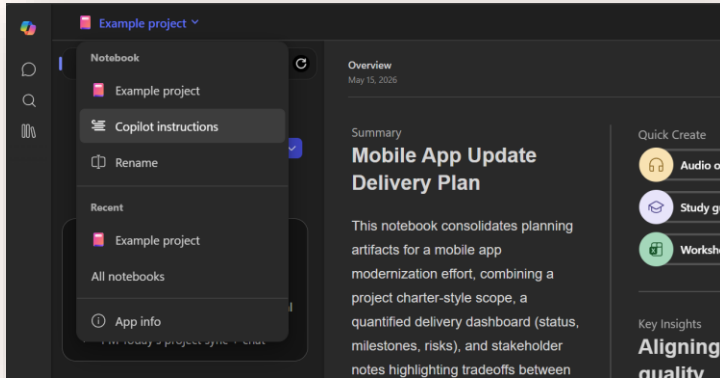

Copilot will suggest a list of references you may want to add. You can also add references by:

- **Filter** – Select **All**, **Files**, **Meetings**, **Emails**, and **Sites**. to filter on the list of suggested references.
- **Search** – In the search bar, enter the name of a specific reference, then select it from the list of suggested references.
- **Upload** – Select the **Upload** button and find the file you want to add.
- **OneDrive** – Select the **OneDrive** icon. In your OneDrive folder, navigate to the file you want, and then select **Add**.
- **Drag and drop** – Drop your file into the section, **Drag your files and other content here**.

7. Select **Create**.

Provide custom instructions for your Notebook

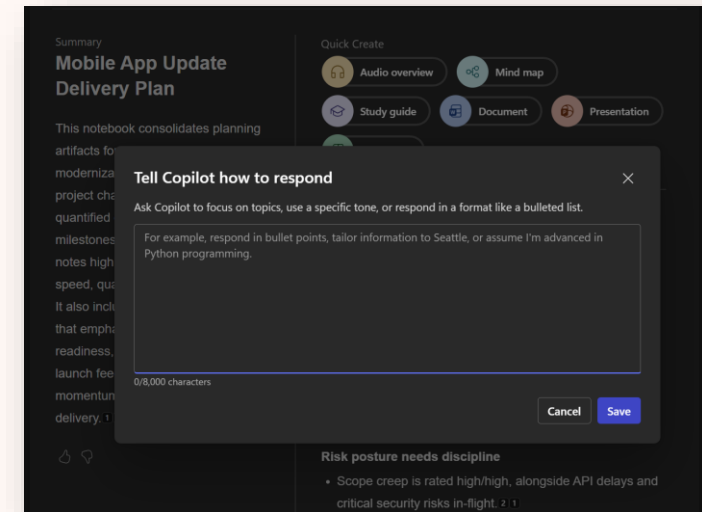

1. In the notebook you want to add custom instructions to, select the expand button next to your notebook name in the upper corner of the left pane.
2. Select **Copilot instructions**.

3. In the dialog, enter specific instructions for Copilot. You can ask Copilot to format responses how you want, focus on a topic, use a specific tone, and more. For example:

Keep responses short, focused and without repetition. Highlight key points using bold text. Clearly show "decisions made" and "actions items". Use bullet points and short paragraphs.

4. Select **Save**.

Start using Copilot Notebooks

Organize research for a new project

Create a summary of all documents in my notebook related to [project name], highlighting key themes, major findings, and actionable next steps.

Start using Copilot Notebooks

Prepare for a team sync to ensure the meeting is focused and productive

Summarize the latest updates from all references in my notebook and create three discussion points for the upcoming team meeting, emphasizing progress, challenges, and decisions needed.

Start using Copilot Notebooks

Draft an initial proposal using your collected references

Draft a one-page proposal for [project name] based on the files and notes in my notebook.
Include an executive summary, project objectives, and recommended next steps.

Current limitations

No image generation or data visualizations: You can't create charts, graphs, or images directly within the notebook.

Limited file grounding: Copilot can use up to 300 files in a notebook to generate answers. When you add a shared location, such as a SharePoint folder or site, Copilot considers the files you have access to in that location and selects up to 300 that are most relevant to your prompt to use for grounding. To make sure a specific file is included, add it directly to your notebook.

Supported file types: docx, .pptx, .xlsx, .pdf, .loop, .page, and OneNote pages.

Deleting notebooks: Deleting a Copilot page or notebook is currently permanent and can't be undone. Notebook recovery is coming with a recycle bin that's in development, and a Copilot Pages recycle bin will become available sooner to restore deleted pages.
